DETAILED ACTION

This action is in response to amendments filed on November 19, 2007.

Allowable Subject Matter

Claims 1-25 are allowed.

The following is an examiner's statement of reasons for allowance:

The claims in the application are deemed to be directed to a nonobvious improvement over the invention patented by Blass in Pat. No. 6,638,025. Blass discloses a rotary hydraulic machine with an external controller that is common in the art. The claims comprise a sensor located on a surface of a control housing extending across an aperture in a casing that houses the rotating barrel assembly for the hydraulic machine, the controller being located in the control housing to simplify the control implementation, but the sensor surface sealing off the control housing from the casing so that, while the sensor is able to access the inside of the casing, the fluid from inside the casing does not contact the controller. This is also a nonobvious improvement over the invention patented by Batchelder et al. in Pat. No. 6,390,780, which discloses a control housing mounted to a casing for a pump, the controller and sensor in combination sealed off from the pump casing. Batchelder uses a more complex magnetic sensor that is only capable of indirectly sensing fluid level specifically so that the sensor does not need to contact the fluid. Therefore, sealing the controls but providing a

sensor in direct contact, as discloses in the present application, are a nonobvious improvement over the sensor system of Batchelder.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
